

CLAIMS

1. A computerized system comprising:
a trainable classifier to generate a priority of a received item; and
a routing mechanism to route the item for communications based on a routing criteria and the priority.
2. A computer-implemented method comprising:
generating a priority of a received item based on a trained classifier; and
routing the item for communications based on a routing criteria and the priority.
3. A machine-readable medium having instructions stored thereon for execution by a processor to perform a method comprising:
generating a priority of a received item based on a trained classifier; and
routing the item based on a routing criteria and the priority.
4. A computerized system comprising:
means for generating a priority of a received item based on a trained classifier;
and
means for routing the item based on a routing criteria and the priority.
